No Walk
Automated Filing System

The filing system that provides density, productivity and cost efficiency.

WHITE
A Pinnacle Automation Company

The No Walk System Brings

The No Walk® automated filing system brings items to the operator, minimizing walk and search time. The No Walk utilizes a horizontal carousel delivery method. The new No Walk II provides additional density and efficiency.

Experience counts...White is the world's largest manufacturer of carousel systems. Over 25 years of successful installations make the highly reliable No Walk system the right filing system for many active applications such as central files, tape libraries, X-rays, etc.

User Benefits

- Quick and easy retrieval and filing. Media is brought to the operator.

- Increases productivity. Eliminates walk and search time.

- Reduces operating expenses. System reclaims nonproductive areas and minimizes staffing requirements.

- Allows easier supervision. Operators pick from front of the unit.

- Stores multiple types of media. Flexible shelf heights and special media holders maximize each section within the system.

- High density storage. Systems provide equal or better density than other automated systems.

- Maximizes existing space. Mezzanine double tiering and 12 foot high carousels utilize vertical space. Fully adjustable carousel lengths fit in most existing office layouts.

Systems Solution

No Walk systems are designed to meet your needs and space requirements, providing a true systems solution. They can be placed in the office or in unimproved areas, reducing your annual costs for heating, lighting and air conditioning.

The carousels' width can surround columns and obstructions. Non-productive narrow office space is easily converted into very valuable filing areas.

Meets ADA intent by allowing the physically challenged to access up to 70% of the files while seated.

Workstation

Floor plans with one or multiple No Walk carousels can comprise a system which provides a workstation environment. A seated operator has up to 70% of a section's media within easy reach.

Supervisors can see their associates operating the No Walk system. Productivity increases as operators have greater organizational abilities working with files and responding to internal or external customer requests.

Experience tells us to expect:

- A dramatic reduction of misfiles.

- Reduction of operator fatigue and increased morale.

- Increased service response.

- Faster access and increased productivity.

- Increased supervisory control.

Central Filing

Multiple No Walk carousels maximize space by increasing density. Productivity is increased by minimizing "dwell" or idle time. White's Check Out Plus™ file tracking software positions the next carousel section for the operator.

Spacing between No Walk carousels can be a few inches apart or "open," creating standard aisles for multiple access required during peak periods. They can even be mounted on Aisle-Saver® carriages to optimize space utilization and provide maintenance accessibility.

Peak period scenarios requiring numerous personnel to access the system include:

- Demand fluctuations

- Initial loading

- Heavy workloads at a specific time

- File purging
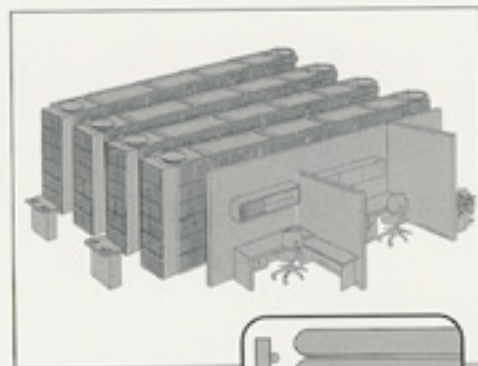

Central filing system secures historical and archival materials.
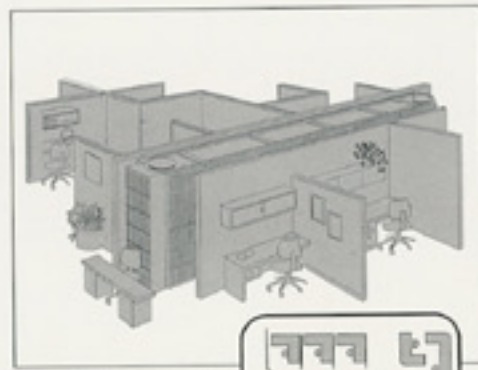

Information core available for general departmental circulation.

Perimeter module maximizes narrow office space and/or unimproved area.

Carousel Features

■ Sections are available in a variety of styles and materials to fit budget, function and decor.

■ Personnel records are maintained on carousels which are mounted on top of White's Aisle-Saver high density movable carriage system. All records are tracked via software.

■ Computer media such as 3480 cartridges, housed in 20 packs, or tape seals can be accommodated.

■ Lightree™ displays highlight items locations.

■ Carousels can be 12 feet tall or double tiered to use available "overhead" space and optimize valuable floor space.

Media

- Legal and letter sidetab files
- Computer cartridges & reels
- Optical disks, CD-ROM
- Forms & publications
- X-rays
- Medical records
- Box storage
- Video or audio tapes & cartridges
- Computer print-outs
- Supplies
- Bulk check filing
- Personnel files
- Suspended files
- Multi-media
- Pathology slides

And More

Controls

A number of optional control methods are available. Each offers its own advantages.

Manual

A bi-directional OSHA compliant foot pedal allows an operator to visually browse each section. Activation of the foot pedal rotates the carousel sections to the left or right.

16 Key Microprocessor Control

The 530 microprocessor control key pad allows for simple push button rotation. Select the desired section number and push "GO." The carousel section appears before the operator via the shortest path. NO WALK carousel sections travel at speeds of 60 feet per minute. The requested section is delivered to the operator in seconds.

Microprocessor controls are RS232 compatible and can be networked. Up to 250 retrievals may be queued to further reduce operator time.

Computer Control

White's fully integrated file and item management software, Check Out Plus, is one of several packages that add value to the No Walk system. The software interfaces with host computers and utilizes the latest bar code technology to track records, locations, provide numerous reports, wait lists, reserve lists, audit trails and efficiency reports.

Decor

No Walk carousels can either blend into existing office decor or can be placed behind office partitions or wall systems.

Safety

No Walk carousels are easy to use and can be equipped with passive safety systems. Photo eyes may be placed to scan both the file access area and perimeter. When the photo eye beam is interrupted the system is instantly stopped. Both operators and materials remain out of harm's way!

Safety mats are also available. A mat is normally placed in front of the carousel. If the operator steps on the mat while the carousels are rotating the system will instantly shut down.

Bi-directional foot pedal keeps operator's hands free.

Key pad control rotates sections via the quickest route.

*Sections may be finished in laminates, fabrics or custom colors.*

*Computer control including bar code technology.*

No Walk II

The No Walk II offers users all the advantages of the standard No Walk...and then some. The No Walk II presents **two** sections simultaneously for retrieving or filing resulting in the following additional benefits:

- Increased capacity. More lineal filing inches or storage capacity in the same length carousel yields additional density.

- Most economical. Increased density means fewer carousels, less space for the same capacity, less maintenance and perhaps less staff. The cost per inch of storage is generally lower as well.

- Higher productivity. Less carousel rotation time increases the operator's productivity since twice the media is available at each stop.

- Increased security...All sections are positioned together restricting access except at the ends of the No Walk II.
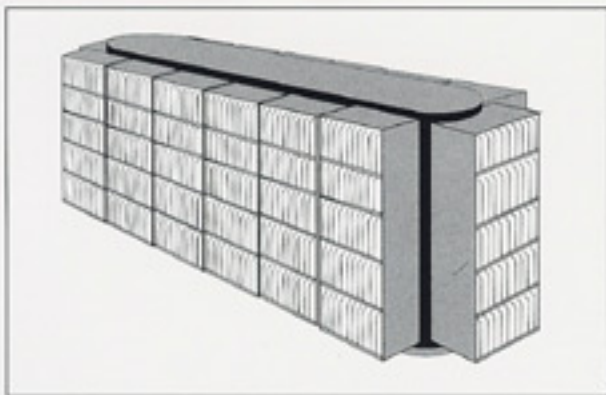

No Walk carousels bring the media to the operator.
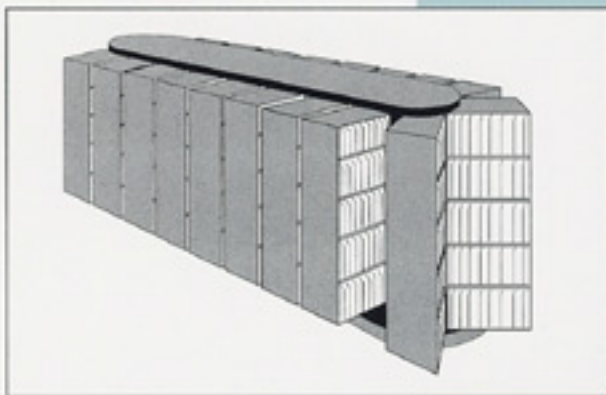

No Walk II presents twice as much to the operator.

Meeting Your Needs

Our nationwide dealer organization will be happy to visit your facility and provide a FREE cost and density analysis for you. White Office Systems is the leading manufacturer of No Walk horizontal carousels, Power File vertical carousels, and Aisle-Saver® compact shelving systems in the world. White Office Systems dealers provide analysis, equipment, collateral product, installation and service.
