

Case Study:

Government Agency requires file storage growth in existing footprint

Problem: 200+ file cabinets take up over 900 square feet of office space and allow for no future growth, requiring the company to relocate to a new office space or implement a high density storage system.

Objective: Design a system utilizing less floor space while adding growth and allowing storage of new end tab folders with color code filing system.

Solution: MTM Business Systems designed a new high density mobile shelving system for letter size file folders.

Our solution reduced the storage footprint required and allowed growth in the existing footprint with a mobile storage system implemented for more storage capacity.
